SUMMARY

Fourth-year Information Systems student who designed and runs two production e-commerce backends. Seeking a part-time Backend internship (available all week), growing toward Data Engineering.

EDUCATION

University of Science, VNU-HCM Expected 2027

B.S. Information Technology, Information Systems major | *GPA: 8.24/10* | *IELTS Academic 7.0, CEFR C1 (01/2023)*

Certifications: Microsoft SQL Server Professional Certificate (Microsoft, 10/2025) · Python for Everybody Specialization (U. Michigan, 09/2025) · SQL Window Functions for Analytics (Coursera, 12/2025) · Programming with JavaScript (Meta, 10/2025)

EXPERIENCE

Full-stack Developer (part-time), IMYSM (fashion startup) 08/2026 – Present

imysmstudio.com

- Wrote the specification and built **IMYSM Studio** to replace Haravan: a bilingual e-commerce site and admin system (**React, Node.js/Express, PostgreSQL**) that runs all direct-channel orders and drove ~60% of direct revenue in its first full month (09/2026)
- Designed the **data model** for orders and inventory, and wrote **transactional** order creation as a PostgreSQL function that **locks rows** to prevent overselling and records **FIFO** batch cost for accurate COGS
- Implemented **role-based access control** with Supabase Auth and **Row-Level Security**, and automated bank-transfer confirmation through **HMAC-verified webhooks** processed **idempotently**
- Built and rehearsed an idempotent **ETL** migration from Haravan (6,281 orders, 11,392 transaction rows), plus a daily **Meta Graph API → PostgreSQL** pipeline that reconciles with the cost ledger within 1%
- Tested critical flows with **Playwright E2E** and post-release smoke tests; paired with Claude Code and reviewed every change before release

Freelance Full-stack Developer, BrownVN (fashion brand) 01/2026 – Present

brownvn.com

- Built and run the whole system solo: bilingual storefront with **PayPal**, COD and bank-transfer checkout, **GHN** shipping-fee API and order tracking (**React 19, Express 5, PostgreSQL**)
- Developed an admin dashboard with 13 modules and ~71 **REST API** endpoints (products, **FIFO inventory**, orders, vouchers, financial reports), recalculating every price **server-side**

PROJECTS

Voucher Marketplace (course: E-Commerce) 06/2026 – 08/2026

github.com/DomTriet/voucher-marketplace · *ec-nhom3.vercel.app*

- Built a voucher marketplace in a team of 4 using a **layered architecture** (route → controller → service → repository) with **Express/TypeScript**, **Drizzle ORM**, **Supabase Auth** and **Next.js**; integrated **PayPal** and **Stripe** sandbox payments

HomeStay Dorm: Dormitory Management System (course: IS Analysis & Design) 02/2026 – 06/2026

github.com/DomTriet/homestay-dorm-management

- Contributed to **requirements analysis** and **system design** as backend developer in a team of 4, then built room search, rental requests and viewing bookings with **Node.js/Express**, **Angular** and Supabase
- Fixed the **GitHub Actions CI** pipeline and wrote **Jest unit tests** with a mocked Supabase client to pass a **70% coverage** gate

Hospital Data Security on Oracle (course: Data Security in IS) 01/2026 – 05/2026

github.com/DomTriet/oracle-admin-hospital-security

- Built the core of Subsystem 1 (team of 5): an **object-oriented C# (.NET WinForms)** app for **Oracle** user, role and privilege management (grant/revoke, column-level privileges), in a project using **RBAC** and **VPD**

SKILLS

Languages: JavaScript / TypeScript, C#, SQL, Python
Backend: Node.js, Express, REST APIs, webhooks (HMAC), authentication and role-based access control
Databases: PostgreSQL (Supabase, RLS), SQL Server, Oracle; data modelling, transactions, migrations
Data: ETL pipelines (Python, SQL), Meta Graph API, reconciliation and reporting
Frontend & Tools: React, Angular; Git, GitHub Actions, Jest, Playwright
